(54) Rotors for gas turbine engines

(57) A rotor for a ducted fan gas turbine engine includes a rotor disc on which a number of circumferentially spaced apart blades (14) are mounted. Wall members (20) are positioned to bridge the space between adjacent blades (14). The wall members correspond in profile with the blades adjacent thereto. A seal is mounted on a side face of each wall member and is bonded to a flexible mounting which is bonded itself to the wall member. The flexible mounting (30) has elastic properties so as to allow the seal (28) to deflect relative to the wall member under centrifugal loading during operation.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 96 30 9401

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
